Dear Recruiting Manager,

Hello!

In response to the position of Instrumentation Analyst, kindly find my resume attached.

I have about 5 years of experience founding and managing an electronics company, performing and documenting associated research, and designing custom scientific instruments, along with a B.Sc. in Science.

Skills particularly suited to the CLS include some experience in the design and fabrication of high vacuum systems, and with beam simulation codes such as IBSimu and Warp.

A few reports detailing personal and company projects are linked in the body of the resume.

Thanks for your time!
